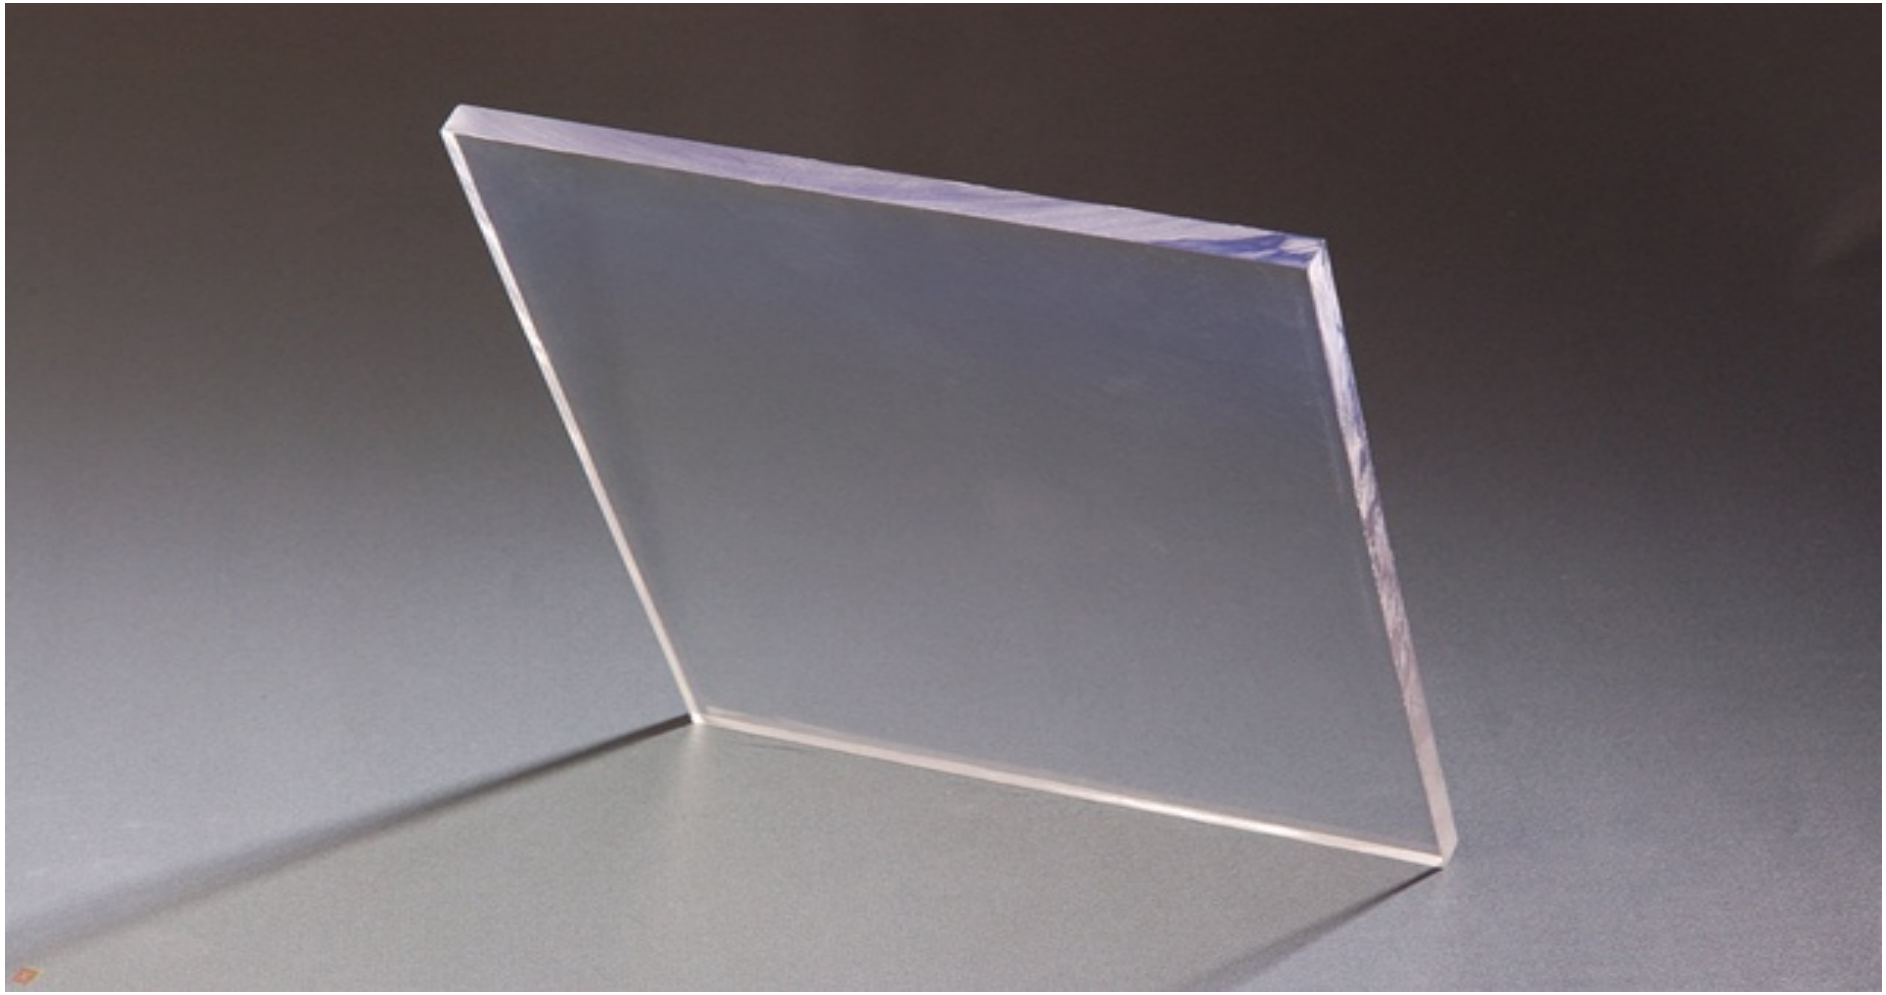
Screen protection with Polycarbonate panels

Have you ever thought about the screen will be destroyed by people or something else when it's installed in a lower and crowded place?

Common screen without protection on surface.

There is a design for the small size screen — screen protection with Polycarbonate panels.



Polycarbonate panels are made by high-performance engineering plastics processing. It is super clear, super insulation, almost transparent like glass, also has the nature of self-destruction firefighting.

Impact-resistant

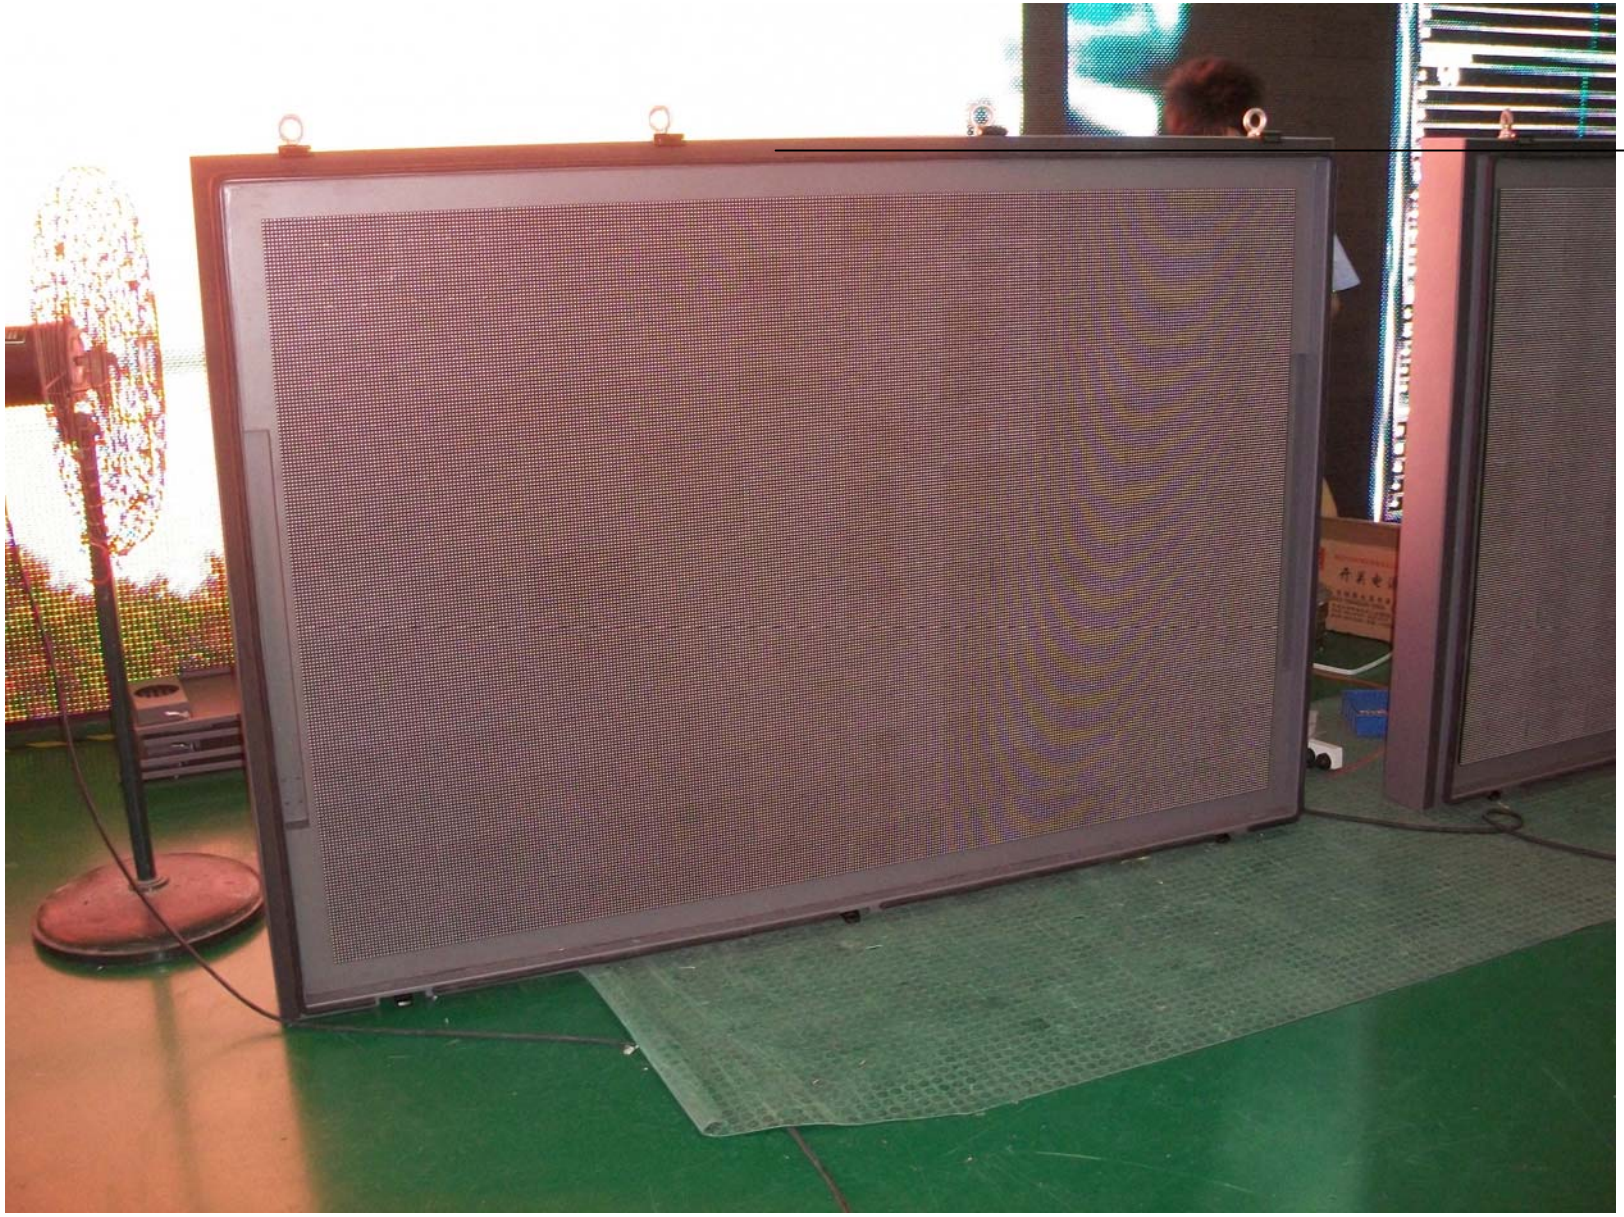
Unbreakable

Strength than glass

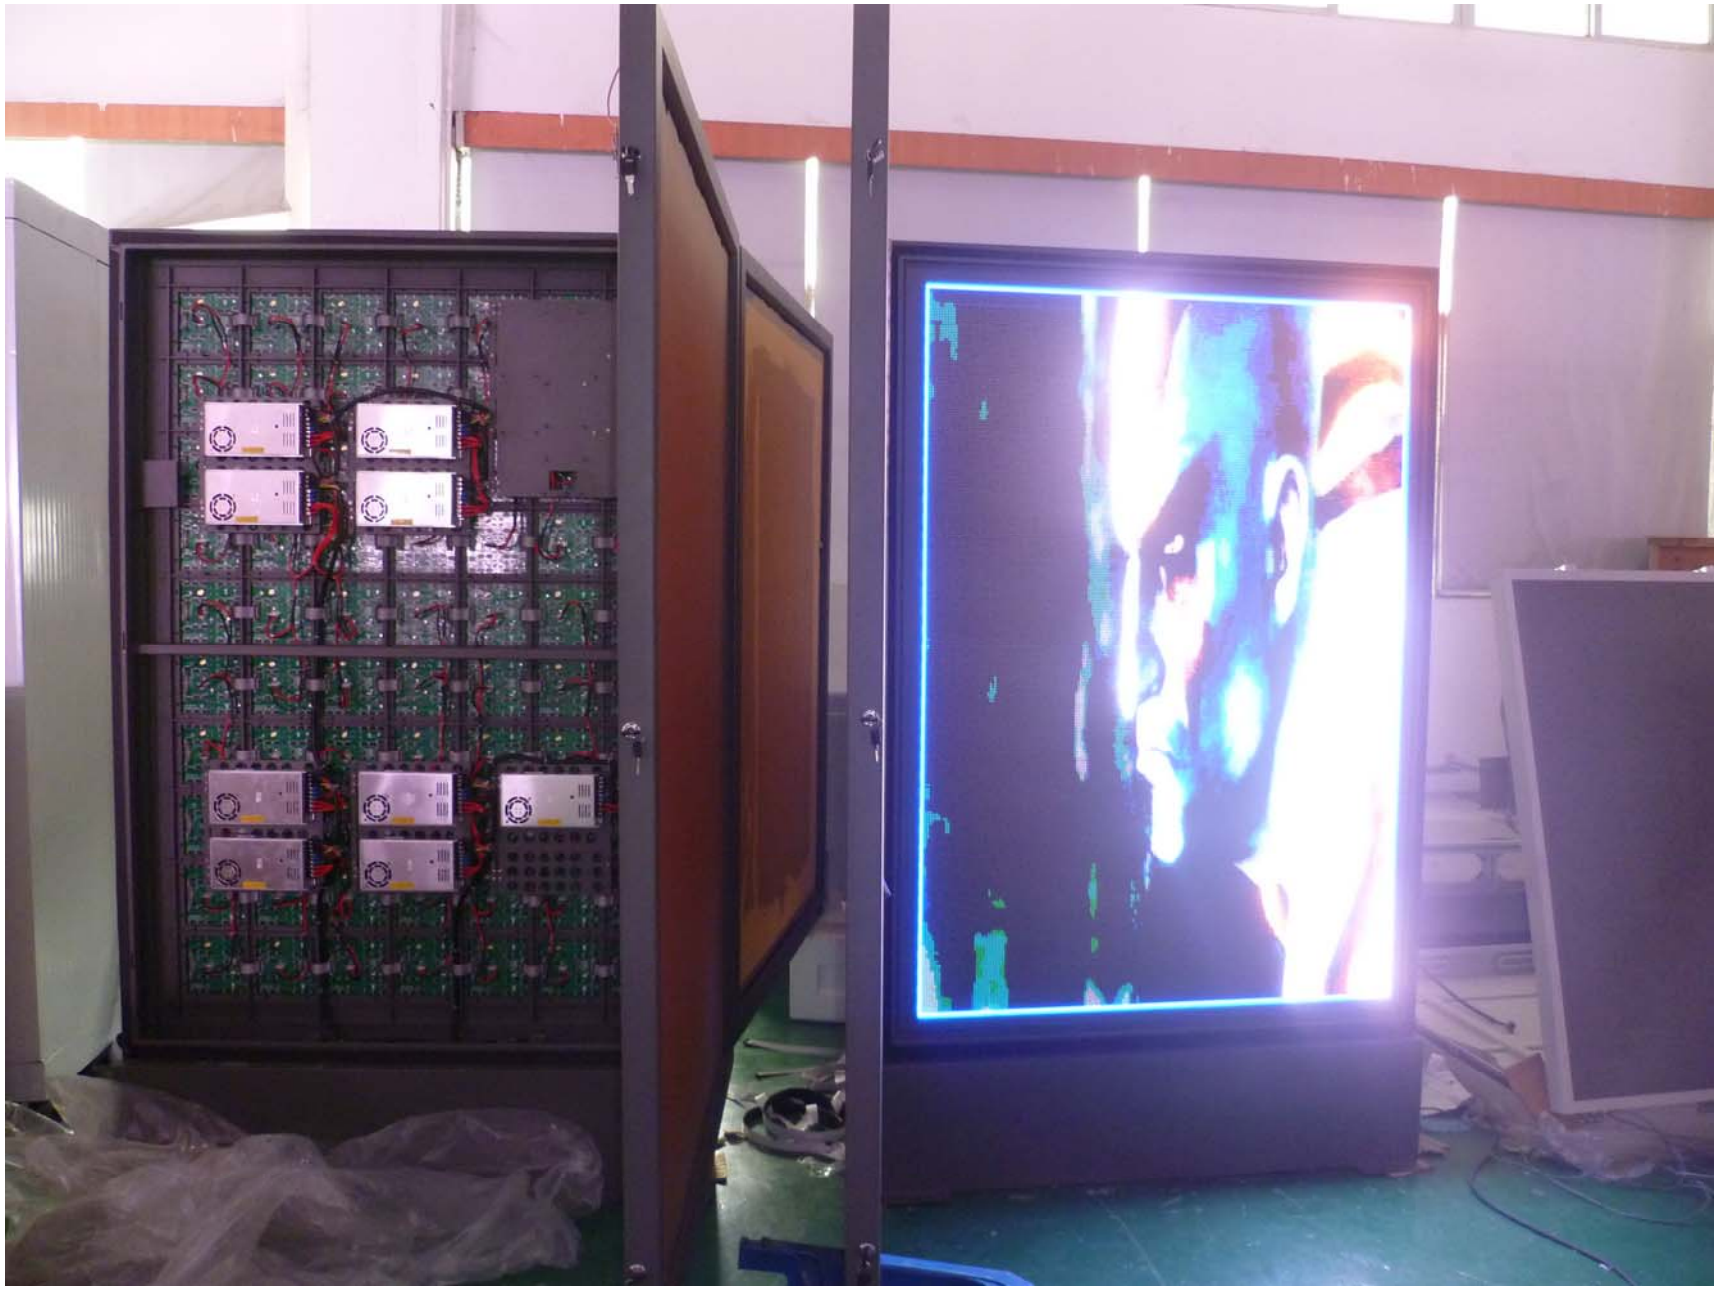
Arched, flexible

Light weight, its weight only half of glass

Small screen with Polycarbonate panel.



Connection structure



PH6mm

1.92m*1.248m

Package

The screen will be packed in a big case.

\

Because there is only one big Polycarbonate panel cover on the surface of whole screen, for convenient to transport, this protection only used in small size screen.
